INTRODUCTION

I am a passionate Full-stack developer in constant evolution. My fascination with problem-solving through programming drives my relentless pursuit of improvement. Always ready to tackle challenges, my proactive approach and commitment to continuous learning enable me to confront any problem with determination and creativity.

PROJECTS

Spotify Clone

Programmed entirely by myself.
The technologies used include Astro, React, Tailwind, Shadcn, and Prisma as the ORM. I also utilized Docker to create a container for the postgresql database. Leveraging Astro's API, I facilitated data consumption on the frontend. The application allows reproduction of all songs with volume controls, enabling both volume increase and decrease.

Online course platform like Udemy

With the help of a tutorial.
The technologies I used to build this application are Next.js 13, TypeScript, Tailwind, Shadcn, Zod, React Hook Form, Prisma as the ORM, Axios, Uploadthing, and many more. I utilized Next.js technology to create the backend, simplifying deployment, and enhancing the connection between backend and frontend.

Breaddit - Reddit clone

The technologies I used are the same as those I used for the online course platform, but implemented differently to create a social network similar to Reddit.

EDUCATION

Self-taught programmer

07/2022 – present | Buenos Aires, Argentina

I pursue programming as a self-taught enthusiast, having completed numerous courses on Udemy and tutorials on YouTube. While this may seem modest, this extensive journey has equipped me with the diverse skill set needed to tackle any challenge effectively.

High School

2015 | Ibague, Colombia
